1.5 Key Software Authorization Setup

A Warrior USB key must be attached to a USB port on the computer, or be contained in the interface panel attached to a USB port on the computer for the software to operate (unless the demonstration release has been installed). In addition, the Warrior 8 key codes for the key being used must be entered into the Warrior Control Panel for the key to be recognized.

From the Warrior group box, select Control Panel.

FIG: 1.5.3 Control Panel Licenses

Unlike the older Warrior software that required a single access code, Warrior 8.0 software requires multiple access codes for the different logging modules that get installed. Although the codes can be manually entered by typing the code for each individual license in the code box, the software can now import the codes by reading a text file and merging them into any existing codes. Click on the [Import from file] button to browse for the import file licenses.ini. With new systems, this file will be located on a USB drive installed in the Scientific Data Systems Interface panel.
